Report Overview:

A hydrogel is a network of polymer chains that are hydrophilic, sometimes found as a colloidal gel in which water is the dispersion medium. A three-dimensional solid results from the hydrophilic polymer chains being held together by cross-links. Because of the inherent cross-links, the structural integrity of the hydrogel network does not dissolve from the high concentration of water. Hydrogels are highly absorbent (they can contain over 90% water) natural or synthetic polymeric networks.

The Global Industrial Grade Hydrogel Market Size was estimated at USD 159.32 million in 2023 and is projected to reach USD 194.71 million by 2029, exhibiting a CAGR of 3.40% during the forecast period.
