Abstracts

Industrial-grade nanosecond solid-state lasers are solid-state lasers that can output lasers at nanosecond pulse widths, usually using crystals or glass doped with rare earth elements (such as neodymium or yttrium) as gain media. This type of laser generates short-pulse lasers with high peak power through rapid energy release, and is widely used in industrial fields such as material processing, precision marking, laser cutting, welding, and surface treatment. It is characterized by high output power, short pulse width, and high beam quality, and can accurately process various hard materials. At the same time, due to its high energy density, it is suitable for high-demand industrial applications such as automobile manufacturing and electronic component processing.

The global Industrial Grade Nanosecond Solid-State Laser market size was estimated at USD 443.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
