Abstracts

Industrial grade nitrogen is a high-purity form of nitrogen gas?typically exceeding 99.5% purity?manufactured and supplied for non-medical and non-food applications across a range of industries, where it is valued for its inert properties, moisture displacement capabilities, and role in preventing oxidation or combustion; common uses include blanketing and purging in chemical processing, oil and gas operations, metal fabrication (such as heat treating and welding), electronics manufacturing (for creating inert atmospheres during production), and tire inflation, distinguishing it from lower-purity or food/pharma-grade variants by its focus on technical performance rather than human consumption safety.

The global Industrial Grade Nitrogen market size was estimated at USD 8430.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
