Abstracts

Industrial-grade Potassium Fluoroaluminate (KAIF?) is an important inorganic chemical material, primarily used as a reducing agent in the refining of bauxite and the aluminum extraction process. In the wet refining of bauxite, it effectively lowers the melting point, enhances reaction efficiency, and reduces energy consumption. Additionally, Potassium Fluoroaluminate is widely used in industries such as glass, ceramics, electronics, and coatings. Due to its excellent chemical stability and high-temperature resistance, it is commonly employed as a catalyst and flux in high-temperature reactions. The production of industrial-grade Potassium Fluoroaluminate typically involves the chemical reaction between aluminum fluoride and potassium fluoride, resulting in a product with high purity and favorable physical and chemical properties, making it suitable for various industrial applications.

The global Industrial Grade Potassium Fluoroaluminate market size was estimated at USD 364.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
