Abstracts

Industrial-grade single-mode fiber laser is a laser that uses optical fiber as a gain medium and outputs a high-quality laser beam with a single propagation mode (i.e., single mode). It is characterized by high spatial mode quality of the beam and a small divergence angle, which is suitable for high-precision processing. The industrial-grade design enables it to have high power, high efficiency, and long-term stable operation capabilities, and can be used in harsh industrial environments. Single-mode fiber lasers are widely used in metal cutting, welding, marking, micro-machining and other fields, and are particularly suitable for precision processing tasks that require high beam quality.

The global Industrial Grade Single Mode Fiber Laser market size was estimated at USD 728.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
