## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Industrial Grade Urea Phosphate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Urea phosphate, also known as urea phosphate or urea phosphate, is a compound produced by the combination of phosphoric acid ( $H_2PO_4$ ) and urea ( $NH_2CONH_2$ ), and its molecular formula is  $(NH_2)_2CO \cdot H_2PO_4$ . The structure of urea phosphate contains a combination of an urea group ( $NH_2CONH_2$ ) and a phosphate group ( $H_2PO_4$ ), which has good water solubility and chemical stability. In 2024, global Industrial Grade Urea Phosphate production reached approximately 84.17 K MT, with an average global market price of around US\$ 986 per MT. The production capacity of a single production line is about 10,000 tons. Gross profit margin is about 20%. Upstream industry: Upstream raw material costs account for about 80% of the total cost. 1 Basic raw materials: Phosphate ore: the most basic source. The price and supply stability of phosphate ores are greatly affected by national policies, environmental protection requirements and mining quotas. Sulfur/sulfuric acid: the key raw material for the production of wet phosphoric acid. The price of imported sulfur has an important impact on cost. Urea: From the fertilizer industry, its price is obviously cyclical. 2 Direct raw materials: phosphoric acid. Flame retardant sales account for 60%, demand has grown rapidly and the market potential is the greatest. Cleaner sales account for 15%. Rust remover is about 13%. Preservative sales account for less than 5%.

The global Industrial Grade Urea Phosphate market size was estimated at USD 83.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
