Report Overview

The helical gearbox is a low-power consumer and is compact in size. This equipment is used for a broad range of industrial applications, but typically in heavy-duty operations. The helical gearbox is popular in the construction of plastics, cement, rubber, and other heavy industrial settings. It is useful in crushers, extruders, coolers, and conveyors, which are all low-power applications.

The helical gearbox is unique in that it is fixed at an angle which, when in motion, enables more teeth to interact in the same direction. This provides constant contact for a given period of time. Extruder helical gearboxes are used when torsion stiffness needs to be maximized and for low-noise applications. Extrusion gearboxes are used in the plastics industry and in machines that require high mechanical power.
