## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Industrial Internet of Things Smart Gateway competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An Industrial Internet of Things (IIoT) Smart Gateway is a key edge device that connects industrial machines, sensors, and controllers to higher-level IT systems, cloud platforms, and data analytics environments, bridging the gap between operational technology (OT) on the factory floor and information technology (IT) systems for enterprise and cloud computing. In 2024, global Industrial Internet of Things Smart Gateway sales volume reached approximately 3.29 million units, with an average global market price of around 485 US\$ per unit.

- Industry 4.0 / Digital Transformation in Manufacturing & Process** Large industrial enterprises are increasingly deploying digital transformation initiatives? smart factories, predictive maintenance, zero-downtime operations? and gateways are central to enabling data connectivity from OT devices to cloud/edge platforms. In manufacturing, for example, legacy machines lack built-in connectivity; gateways convert signals, translate protocols, and enable these machines to join data-driven ecosystems.
- Rise of Edge Computing & Latency/Critical-Control Demands** As more industrial applications demand real-time processing (robotics control, autonomous vehicles in factories, remote monitoring of critical infrastructure), there?s a push to move compute closer to the edge. Smart gateways often embed edge compute (analytics, AI inference) and support local decision making rather than purely cloud-centric models. A report notes the deployment of gateways ?closer to the source to reduce latency? as a growth factor. This shift grants gateways increased value beyond mere connectivity? transforming them into ?mini-edge servers?.
- Proliferation of Connected Devices & Data Volumes** The explosion of IoT devices translates into higher demand for gateways as aggregation and management points. One source reports the

number of connected IoT devices is projected to reach ~39 billion by 2030. Industrial environments are no exception: sensors, actuators, cameras, robots all generate data and need gateways to manage connectivity, protocol conversion, and secure data flows into enterprise systems.

4. 5G, Private Networks & Advanced Connectivity Next-generation connectivity (5G, Private LTE/5G campus networks) in industrial environments is boosting smart gateway demand. As factories adopt 5G for high-speed, low-latency and massive-device connectivity, gateways are needed to interface devices and manage multi-connectivity (wired, WiFi6, LoRa, 5G) and network slicing. Therefore, gateway vendors that support 5G modules, edge compute and ruggedization are well positioned.

5. Sector-Specific Automation & Digitalization (Utilities, Oil & Gas, Smart Infrastructure) Various heavy-asset industries (utilities, oil & gas, transport/logistics) are accelerating IIoT deployments for condition monitoring, remote operations, grid management, smart infrastructure.

The global Industrial Internet of Things Smart Gateway market size was estimated at USD 1594.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.60% during the forecast period.
