## Abstracts

Industrial isolated gate driver ICs are critical components in power electronic systems where high-voltage switching of power devices like MOSFETs and IGBTs is required. These gate drivers are used to control the switching of these devices while maintaining electrical isolation between the low-voltage control side (typically a microcontroller, DSP, or FPGA) and the high-voltage power side (typically a motor, inverter, or power converter). Electrical isolation is necessary to protect sensitive low-voltage circuits from the high voltages and noise present on the power side.

The global Industrial Isolated Gate-Driver IC market size was estimated at USD 274.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
