Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Industrial Lifting Hooks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of industrial lifting hooks reached 18.5 million units, with an average selling price of US\$42 per unit. Industrial lifting hooks are load-bearing and connecting components used in bridge cranes, gantry cranes, and port loading and unloading equipment. They are typically made of forged alloy steel (G20CrNiMo/G80 grade steel) and undergo quenching, tempering, and non-destructive testing. Leading companies in the industry have gross profit margins of approximately 18-26%. The main upstream raw materials are alloy steel ingots, forging billets, and heat treatment fuels, accounting for 62-71% of the total cost. Steel consumption per unit is approximately 3.2-6.5 kg. Downstream industries include machinery manufacturing, port logistics, metallurgy, heavy industry, and energy construction. Manufacturing and port loading and unloading equipment companies are the largest consumer groups, with an average of 2-8 hooks consumed per unit of downstream equipment. In the future, with the increasing demand for upgrading old production lines, constructing new energy equipment (such as wind power hoisting), and transforming ports into intelligent ones, high-strength, lightweight, and safety-monitoring hooks (with stress sensing and IoT monitoring) will become the main business opportunities. Suppliers with material upgrade and safety digitization capabilities will gain a higher market share and bargaining power.

The global Industrial Lifting Hooks market size was estimated at USD 778.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
