Abstracts

Radiant tube heaters are gas-fired infrared heating devices and rank among the group of decentralized heating systems. As opposed to central heating systems, they are characterised by the fact that their heat is precisely generated at the place where it is needed (warehouse, workplace, production etc.). A radiant tube heater outputs infrared radiation via its long dark radiant tubes.

Quick Warm-Up: Radiant tube heaters can reach their desired operating temperature quickly, providing immediate warmth when turned on. This feature is particularly beneficial in spaces where rapid heating is required.

Zoning and Flexibility: Radiant heating systems can be divided into zones, allowing for customized heating in different areas of a building. This zoning capability enhances energy efficiency and comfort control.

Low Maintenance: Radiant tube heaters have fewer moving parts compared to some other heating systems, which can result in reduced maintenance and operational costs over time.

Longevity: High-quality radiant tube heaters are designed to have a longer service life, offering durability and reliability to users.

Installation Cost: The initial cost of purchasing and installing radiant tube heaters can be relatively higher compared to some other heating systems. This upfront investment can be a barrier for some potential buyers.

The global Industrial and Commercial Radiant Tube Heaters market size was estimated at USD 164.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
