Industrial Pad Printing Service is a high-precision surface treatment process based on the principle of gravure printing. It transfers images and texts from the etched gravure to the surface of irregular or special-shaped substrates through a silicone pad head, covering core processes such as plate making, inking, transfer, and curing. With its curved surface adaptability, micro-area printing capability, multi-material compatibility, high efficiency and low cost advantages, it is widely used in 3C electronic product precision character printing, automotive interior logos, medical equipment corrosion-resistant logos, toy anti-counterfeiting patterns, and new energy equipment functional coatings. It has become a core solution to break through the shape limitations of traditional printing and realize the decoration of micro components and complex surfaces.
