Report Overview

The planetary mixer is suitable for the mixing of ointments, inks, sauces, pastes and foams used in the pharmaceutical, food, chemical and related industries. In a planetary mixer, the mixing blades rotate in opposite directions to sweep the entire circumference of the container and rotate around its own axis. Tight mixing is achieved in a short time interval. In the planetary mixer, the mixing element is vertically raised by an electric or hydraulic lifting device. The mixing element can be cleaned completely by removing the container or by rotating the blades in a container filled with solvent. The planetary mixer is equipped with a high-speed emulsifier in the center to fully mix the materials. Due to the typical eccentric movement of the product, which is caused by the eccentric position of the mixing arm relative to the center of the bowl, the mixing is uniform and intense. The main application fields are food, pharmaceutical, cosmetics and chemical industry, of which food industry is the biggest market with a share about 58%, followed by chemical and pharmaceutical industry. In terms of product, light sensors can be divided into two types: multi arm mixer and single arm mixer. The multi arm mixer holds a share about 85%. The major manufacturers in the world include VMI, Buhler Group, POLIN, INC. etc.
