Report Overview

The industrial plate bending machine is a kind of equipment that makes use of work roll to bend and shape the sheet metal. It can form the parts of different shapes such as cylinders and cones. The working principle of the plate bending machine is through the action of external force such as hydraulic pressure and mechanical force to make the work roll move, so as to make the plate bending or bending. According to the rotating movement and position change of the work roll with different shape, the elliptical parts, arc parts, and cylinder parts can be machined.

The global Industrial Plate Bending Machines market size was estimated at USD 985.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
