Report Overview:

The industrial high-pressure cleaner is mainly composed of a booster pump and a power drive. Its working principle is to use a water booster pump power unit to make the high-pressure insert pump generate high-pressure water to flush the surface of the object to reduce the dirt and flush away. To achieve the purpose of cleaning the surface of the object. When the impact force of water is greater than the adhesion of dirt to the surface of the object, the high-pressure water will peel off the dirt and wash it away to reach the cleaning surface of the object. Generally, high-pressure water column can be used to remove the dirt. Unless it is a stubborn oil stain, it is necessary to add a detergent. Otherwise, the foam generated by strong water pressure is enough to take away the general dirt.
