### Report Overview:

Radiography is an imaging technology that uses gamma rays and X-rays to penetrate an object. The image generated helps to identify deformities or defects, which are not visible to the naked eye. The object under purview is exposed to radiation waves, and a film or a digital detector is used to capture an image of the object. This image assists the end-user (industry) to identify defects, if any, on the object; darker areas on the image indicate high levels of radiation, whereas lighter areas indicate low levels radiation.
