Abstracts

Industrial rhamnolipid is a glycolipid anionic biosurfactant produced by *Pseudomonas* or *Burkholderia* through biological fermentation, which has many excellent properties and wide industrial applications. In the oil & gas sector, rhamnolipids are used more often in EOR processes because of their excellent surfactant properties. These properties improve oil extraction efficiency and support environmentally friendly practices. This not only boosts oil recovery rates but also aligns with the industry's move towards greener technologies. At the same time, the cosmetics and personal care sectors are using rhamnolipids for their gentle, effective, and eco-friendly qualities. They work well as natural surfactants in products like shampoos, cleansers, and lotions, meeting the growing consumer demand for sustainable and natural ingredients. The use of rhamnolipids in these two sectors highlights their versatile applications and drives market growth.

The global Industrial Rhamnolipid market size was estimated at USD 493.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
