Report Overview:

Add a vision system to a robot and you give it eyes, the robot can find objects in its working envelope — reducing the need for complex and expensive fixtures. This increases the flexibility of robotic automation, adapting to variation in part size, shape and location — ultimately reducing cell complexity. By adding a vision system robot palletizing and de-palletizing becomes practical, components can be assembled, dies unloaded, and parts lifted off racks and out of bins. It's even possible to track and pick parts in motion on a conveyor.

The Global Industrial Robot Vision Systems Market Size was estimated at USD 5555.93 million in 2023 and is projected to reach USD 7925.91 million by 2029, exhibiting a CAGR of 6.10% during the forecast period.
