Report Overview

An industrial rotary evaporator is a device used in laboratories and industrial settings to remove solvents from samples through evaporation. It consists of a rotating flask, a heating bath, a condenser, and a collection flask. The sample is placed in the rotating flask, which is then heated by the heating bath. The solvent evaporates and rises into the condenser, where it is cooled and condensed back into a liquid state. The condensed solvent is then collected in the collection flask, while the remaining sample is left behind. Industrial rotary evaporators are commonly used in industries such as pharmaceuticals, chemical engineering, and food processing for various applications such as concentration, purification, and solvent recovery.
