## Abstracts

Shaker dust collectors are a shake-cleaning baghouse system. The system either cleans off-line when the airflow is temporarily halted or sections the baghouse into compartments. A compartmented design offers continuous cleaning of the unit while allowing for the individual compartments to be taken offline for servicing. These units are common where it is impractical to supply compressed air for bag cleaning, as in foundries, steel mills, the mining industry, power plants, and smelting industries. They are also used where dry material is stored in silos and other bulk storage containers.

The global Industrial Shaker Dust Collector market size was estimated at USD 750.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
