Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Iohexol competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Iohexol is a non-ionic, iodinated radiocontrast agent used to enhance visibility of anatomical structures in X-ray based imaging procedures (CT, angiography, myelography, urography, joint studies and other contrast-enhanced scans). The active pharmaceutical ingredient (API) is chemically an organoiodine compound and is supplied to formulators of finished contrast media (sterile injectable solutions, oral/rectal solutions for bowel studies, or intrathecal preparations) and, in some cases, to manufacturers of specialty laboratory reagents that use iodinated density media. In commercial terms the Iohexol API market therefore covers: production and sale of technical- and pharmaceutical-grade Iohexol (including batches certified to pharmacopeial standards); regulatory documentation such as Drug Master Files (DMFs) and certificates of analysis supplied to finished product manufacturers; contract manufacturing (CMO) and custom synthesis for brand and generic contrast media producers; and the downstream finished-dosage contrast media market that ultimately consumes the API. Iohexol sold into the pharmaceutical channel must meet stringent purity, identity, and particulate/sterility standards appropriate for parenteral use; producers commonly supply documentation aligned with pharmacopeial monographs and regulatory expectations for injectable contrast media. Because finished contrast products are administered intravenously, intrathecally, or orally for diagnostic imaging, the API's manufacturing process, residual solvent profile, heavy-metal content, and impurity profile are central to market acceptability. Compliance with pharmacopeial monographs and the ability to support regulatory filings (e.g., provision of a US DMF, CEP for EU markets, or equivalent dossiers) are usual entry barriers for suppliers. In 2024, global Iohexol production reached approximately 5,545.5 MT, with an

average global market price of around US\$ 121.5 per kg. The global single-line production capacity ranges from 500 to 800 MT per year. The industry's gross profit margin is approximately 35%-45%. Demand for Iohexol is driven by the global use of contrast-enhanced imaging in hospitals, outpatient imaging centers, interventional radiology, cardiology suites, and surgical planning. The primary use is in computed tomography (CT) angiography and general CT imaging to delineate blood vessels, organs, and lesions; it is also used in intrathecal myelography and specialized procedures. Growth drivers on the demand side typically include expansion of medical imaging capacity (new CT installations and interventional suites), ageing populations with higher imaging utilization, rising incidence and detection of chronic diseases (cardiovascular disease, cancer), and broader adoption of minimally invasive image-guided procedures that require high-quality contrast agents. In many clinical pathways, contrast media are integral to diagnostic accuracy, so demand is relatively inelastic to small price fluctuations ? although procurement practice and tendering by hospitals, health systems, and large distributors can exert strong price pressure. The Iohexol market is a technically and regulatory-intensive niche within the broader contrast media and radiopharmaceutical supply chain. Its demand is underpinned by durable clinical needs ? diagnostic CT and image-guided procedures ? with steady growth driven by demographic changes and expanding global imaging capacity. Market developments will be shaped by: regulatory expectations (pharmacopeial alignment, DMFs), procurement behavior (tendering and generic competition), supplier capability (GMP/DMF/CEP credentials), and regional investment in imaging infrastructure. While substitution risk is limited for many CT applications, cost pressure, supply reliability, and environmental/regulatory compliance will continue to drive supplier consolidation, vertical integration, and selective capacity investments. For new entrants, the combination of capital-intensive quality systems and the need to support regulatory dossiers makes the market accessible mainly to established API manufacturers or CMOs that can rapidly meet pharmacopeial and regulatory demands. Global key manufacturers of Iohexol include GE Healthcare, Otsuka Chemicals, Starry, etc. Global top three manufacturers hold a share about 85%.

The global Iohexol market size was estimated at USD 674.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
