Report Overview

Speed Monitoring Systems is used to detect, monitor and control the speed of motor and generator thereby ensuring the safe operating of motoring. It reduces the chance of breakdown of motor and hazard due to motor operating in unmoral speed. It also provides the data of motor operating situation for development and diagnostics.

One of examples of speed monitoring systems is speed monitoring relay. The speed monitoring relay monitors a motor for exceedance of the upper and lower limit via a sensor attached to the motor, which supplies one impulse per rotation. A speed signal edge is evaluated to also ensure the reliable detection of motors and systems in idle states.
