### Report Overview

Industrial Super Absorbent Polymer (SAP) is a type of water-absorbing polymer that can absorb and retain large amounts of liquid relative to its own mass. It is used in a variety of applications, including personal hygiene products such as diapers and sanitary pads, agricultural products such as soil conditioners, and industrial products such as oil and water absorbents.

The upstream industry chain of SAP includes the production of acrylic acid and the downstream industry chain includes the manufacturing of various products that use SAP as a key component. The production of acrylic acid involves the petrochemical industry, which extracts and processes crude oil and natural gas. The downstream industry chain includes manufacturers of personal hygiene products, agricultural products, and industrial products.

The world market share of SAP is distributed among several major manufacturers, including BASF, Nippon Shokubai, Evonik, Sumitomo Seika, and LG Chemical. These companies dominate the market due to their large-scale production facilities and established distribution networks.
