Report Overview

A turbocharger is a turbine-driven forced induction device that increases an internal combustion engine's efficiency and power output by forcing extra compressed air into the combustion chamber. This improvement over a naturally aspirated engine's power output is due to the fact that the compressor can force more air—and proportionately more fuel—into the combustion chamber than atmospheric pressure (and for that matter, ram air intakes) alone.

The global Industrial Turbochargers market size was estimated at USD 12340 million in 2023 and is projected to reach USD 27928.15 million by 2032, exhibiting a CAGR of 9.50% during the forecast period.

North America Industrial Turbochargers market size was estimated at USD 3760.43 million in 2023, at a CAGR of 8.14% during the forecast period of 2024 through 2032.
