Report Overview

A belt is a loop of flexible material used to link two or more rotating shafts mechanically, most often parallel. Belts may be used as a source of motion, to transmit power efficiently or to track relative movement. Belts are looped over pulleys and may have a twist between the pulleys, and the shafts need not be parallel.

The variable speed belt has two kinds of structures, which are wrapping cloth or cutting edge. The cast teeth reduce heat accumulation or stress concentration and extend the life of the belt.
