Report Overview

An industrial vehicle collision avoidance system (IVCAS) is a safety system that uses sensors and software to detect and prevent collisions between industrial vehicles. IVCAS systems are typically used in warehouses, factories, and other industrial settings where there is a high risk of collisions.

IVCAS systems typically use a variety of sensors to detect objects and vehicles in the environment. These sensors can include radar, lidar, ultrasonic, and cameras. The software then uses this information to determine if a collision is imminent. If a collision is imminent, the system will alert the driver of the vehicle and take corrective action, such as braking or steering.

IVCAS systems can help to prevent collisions and injuries in industrial settings. They can also help to improve efficiency by reducing the amount of time that is spent on accidents and investigations.
