Abstracts

Industrial vehicles are vehicles that are used for different industrial purposes, such as loading, lifting, and movement of loads. For medium-distance movement of loads, powered vehicles such as lift trucks are used where the load is batched in parts in either a container or a pallet. In case of short-distance transport, manual or semi-powered carts are used. These vehicles are only capable of moving one load at a time from one place to another. However, there are multiple load transporters that can move more than one load at a time, from one or more sources to the preferred destination.

The global Industrial Vehicles market size was estimated at USD 23030.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
