Report Overview:

Robot welding is the use of mechanized programmable tools (robots), which completely automate a welding process by both performing the weld and handling the part. Processes such as gas metal arc welding, while often automated, are not necessarily equivalent to robot welding, since a human operator sometimes prepares the materials to be welded. Robot welding is commonly used for resistance spot welding and arc welding in high production applications, such as the automotive industry.

The Global Industrial Welding Robots Market Size was estimated at USD 6482.91 million in 2023 and is projected to reach USD 8837.72 million by 2029, exhibiting a CAGR of 5.30% during the forecast period.
