## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Industrial Wireless Charging Solutions competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Industrial Wireless Charging Solutions refer to non-contact power-transfer systems designed for industrial environments, enabling automated and maintenance-free charging for AGVs/AMRs, forklifts, industrial robots, sensors, UAVs, and warehouse handling equipment. Core technologies include inductive power transfer, resonant wireless power transfer, high-frequency magnetic coupling, wide-gap compensation control, and multi-coil array management, integrated with industrial-grade power modules, ruggedized enclosures, communication interfaces (CAN, EtherCAT, Modbus), and safety-monitoring systems. Compared with traditional plug-in charging, industrial wireless charging enables 24/7 autonomous charging, eliminates connector wear, reduces labor demand, and increases equipment uptime, becoming critical infrastructure in smart manufacturing and smart logistics. Typical solutions consist of a transmitter (TX), receiver (RX), power-conversion unit, controller, thermal-management components, and software monitoring platforms. They are offered in low-power (50?500 W), mid-power (0.5?5 kW), and high-power (5?50 kW+) configurations to meet diversified deployment needs. These systems are increasingly adopted in Industry 4.0 factories, intelligent warehouses, e-commerce logistics centers, ports, and autonomous mining vehicles, serving as a key enabler for unmanned, continuous, and flexible industrial operations. Based on authoritative industry databases, manufacturer disclosures, and validated interview insights, global shipments of industrial wireless charging systems reached 350,000?500,000 units in 2024 across all power segments (50 W to 50 kW). Weighted by product mix, the mainstream FOB price range is approximately USD 280?650 per unit.

The global Industrial Wireless Charging Solutions market size was estimated at USD 120.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 20.00% during the forecast period.
