## Abstracts

Industry model low-code development services are a technological solution that allows businesses to quickly build, deploy, and manage industry-specific business models and applications without writing extensive code. This service enables business users and developers to collaborate efficiently and respond quickly to market demands through visual development tools and pre-built industry templates, while reducing development costs and time. These services typically offer both cloud and on-premises deployment options to meet the security, compliance, and flexibility requirements of different enterprises. The downstream applications of industry model low-code development services primarily include manufacturing, finance, energy and power, government and public services, healthcare, transportation and logistics, retail chains, telecommunications operators, and large enterprise digital departments?scenarios requiring the rapid construction of business systems using industry-specific models. Downstream customers leverage the industry logic, process templates, and data models built into the low-code platform to achieve rapid business system construction, process automation, cross-system integration, and continuous iteration, significantly reducing development costs and delivery cycles, making it particularly suitable for industries with complex business processes and frequently changing requirements. Because low-code industry models are software and platform services with high technical barriers, high reusability, and high customer stickiness, their revenue structure includes subscription fees, platform usage fees, industry model licensing, and consulting and implementation fees, with low-code industry model development services accounting for approximately 63%. Industry model low-code development services are becoming a key driver of digital transformation. By simplifying the application development process, it enables enterprises to respond to market changes and customer needs more quickly. This service not only lowers the technical threshold,

allowing non-technical personnel to participate in development, but also accelerates business innovation and enhances the competitiveness of enterprises. With the continuous evolution and maturity of low-code platforms, enterprises will use low-code development in a wider range of industry scenarios in the future to achieve business process automation and digital transformation, but the key to success lies in finding a deployment model and platform provider that suits their needs.
