Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Inert Pump Oil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Inert pump oil is a specially refined or synthesized lubricant with the characteristics of chemical inertness, low vapor pressure, and high oxidation resistance. It is specially used in high vacuum systems (such as diffusion pumps, molecular pumps) and precision instruments. Its main components include perfluoropolyether (PFPE), polyphenylene ether (PPE) or synthetic hydrocarbon (SHC). It can remain stable in extreme temperatures (-80?~300?) and strong radiation environments, and avoid reactions with active gases (such as oxygen and halogens). Inert pump oil can significantly extend the life of equipment and reduce pollution. It is widely used in high-end fields such as semiconductor manufacturing, aerospace technology, and nuclear industry.

The global Inert Pump Oil market size was estimated at USD 521.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
