Abstracts

Inertial base frames are structures designed specifically to support mechanical equipment. They reduce vibration, provide mounting points for vibration isolators, prevent relative motion of components, lower the center of gravity to reduce sway, reduce motion during startup and shutdown, reduce the reaction forces generated by operating loads, and serve as a sound barrier. They are widely used to support equipment such as centrifugal chillers, compressors, pumps, fans and internal combustion engines. The unique design combines concrete and steel to achieve a high-strength, high-rigidity and lightweight load transfer system.

The global Inertia Base Frames market size was estimated at USD 674.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
