### Report Overview

Inertial Separator Dust Collector is a kind of dust remover, which can make dust-containing gas collide with baffle or change the direction of air flow rapidly, and use inertia force to separate and collect dust. Inertia dust remover is also called inertia dust remover. Because of the different inertia force between the dust particles and the gas in the moving air stream, when the dust-containing gas makes a sharp turn or collides with an obstacle, the movement of dust particles will be separated from the gas purification equipment known as inertial or inert dust collector.
