### Report Overview

Infant Radiant Warmer is a bed for stabilizing the body temperature of a newborn or premature infant. It has a heat source positioned above the baby to keep his or her temperature constant. In detail, the infant radiant warmer is a mobile, battery powered device that addresses severe heat loss suffered by some infants by allowing the infant's bed to be uniformly heated. This is done by infrared radiation (IR) from a quartz heater that is beamed by a parabolic reflector uniformly over an infant's bed. The device has a sensitive thermostat that does not require calibration to use it. The control panel can sense the infant's temperature quickly through the use of a highly sensitive thermistor probe.

In the US market, the leading manufacturers of infant radiation warmers are GE Healthcare, Drager, Natus Medical, Advanced, Atom Medical, Fisher and Paykel, Phoenix Medical, and JW Medical, among others, with GE Healthcare leading the industry with a 61 percent market share.
