Report Overview

Diagnostic tests are important for diagnosing diseases and for improving global health. Traditional diagnoses of infectious disease resulted in inaccurate results and were time-consuming. This flaw led to the emergence of rapid, accurate, and portable point-of-care testing products in the market. POC testing enables faster diagnosis of infectious disease near the patient site providing quick results? Several researchers are now focused on the development of multiplex point-of-care diagnostic technologies. These MPOCT devices consist of hybridization papers, array settings, bead technology, or microfluidic systems that reduce the assay steps and provide diagnosis results in 15-30 minutes.

The global Infectious Disease POC Diagnostic market size was estimated at USD 1326 million in 2023 and is projected to reach USD 3204.23 million by 2032, exhibiting a CAGR of 10.30% during the forecast period.
