Inference AI chips are hardware accelerators specially designed to perform artificial intelligence model inference tasks. Compared with traditional processors (such as CPUs), inference AI chips can efficiently handle a large number of matrix operations and vector calculations in machine learning models by optimizing the computing architecture, significantly improving inference speed and energy efficiency. They usually integrate a large number of parallel computing units and specialized hardware modules, such as tensor processing units (TPU), neural network processing units (NPU), etc., which can accelerate the inference process of deep learning models in edge devices or data centers. Inference AI chips are widely used in scenarios that require efficient reasoning, such as autonomous driving, smart cameras, speech recognition, and recommendation systems.

The global Inference AI Chip market size was estimated at USD 14210.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 25.70% during the forecast period.
