Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Inflatable Pet Bed competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of inflatable pet beds was estimated at 15-30 million units, with an average selling price of approximately \$15-\$100 per unit and a gross profit margin of about 45%. A single production line had a capacity of approximately 500,000-1 million units per year. An inflatable pet bed is a pet resting product designed for portability and comfort. It solves the problem of pets needing a comfortable resting place outdoors or while on the move. It is a portable pet resting mat that forms a support structure by inflating air. Its core features are portability, foldability, and ease of storage. The upstream of the inflatable pet bed industry mainly consists of the petrochemical industry, which provides the core raw materials needed to produce the bed body, such as PVC and TPU plastic granules, nylon fabric and other textile materials, as well as valves. The midstream is the manufacturing and assembly stage, including processing raw materials into finished inflatable beds and integrating purchased accessories such as small air pumps. Production is typically outsourced by brands to specialized inflatable product factories. The downstream is ultimately sold to consumers through online e-commerce platforms and offline channels such as pet stores and supermarkets. The demand stems primarily from the growing number of modern pet owners who "travel with their pets," including trips, camping, and outdoor activities. The core driving force is the urgent need for portability, space-saving storage, and providing pets with temporary, comfortable resting places.

The global Inflatable Pet Bed market size was estimated at USD 600.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.00% during the

forecast period.
