Abstracts

Infrared lighting modules are specialized optoelectronic devices designed to emit light in the infrared spectrum, typically invisible to the human eye but detectable by sensors and cameras, making them essential components in applications such as night vision surveillance systems, automotive safety (e.g., driver monitoring and LiDAR), industrial automation (e.g., object detection and sorting), and consumer electronics (e.g., facial recognition and gesture control). These modules often incorporate LEDs or laser diodes, along with optical elements like lenses or diffusers to shape and direct the IR illumination, and are engineered for specific wavelength ranges?commonly near-infrared (NIR, 700?1400 nm) or short-wave infrared (SWIR, 1400?3000 nm)?depending on the use case and sensor compatibility. Key performance metrics include output power, wavelength accuracy, beam angle, efficiency, and thermal management, with advancements focusing on miniaturization, higher power densities, and integration with smart systems for adaptive lighting.

The global Infrared Lighting Module market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.15% during the forecast period.
