Report Overview

An Infrared Photo Tube Tester is a device used to test the performance of infrared photo tubes. Infrared photo tubes are electronic devices that convert infrared light into an electrical signal. These tubes are commonly used in night vision devices, such as night vision goggles and cameras. The Infrared Photo Tube Tester works by emitting a calibrated amount of IR light towards the photo tube being tested. The photo tube then converts the incoming IR light into an electrical signal, which is measured by the tester. The tester provides information on the sensitivity, resolution, and other specifications of the photo tube being tested. Infrared Photo Tube Testers are commonly used by manufacturers and repair technicians to ensure the quality and performance of infrared photo tubes before they are installed in night vision devices.
