## Abstracts

An infrared sauna pod is a compact, modern version of a traditional sauna, utilizing infrared light to heat the body directly rather than the air around it. Unlike conventional saunas, which rely on steam or hot air to warm the environment, infrared saunas emit infrared radiation that penetrates the skin and tissues, leading to a deep, therapeutic heat experience. This targeted heating is believed to offer various health benefits, including improved circulation, detoxification, pain relief, skin rejuvenation, and relaxation. Infrared sauna pods are designed for individual use and typically have a sleek, ergonomic shape that surrounds the user, providing a more focused and comfortable session compared to larger sauna rooms. They often feature built-in controls for adjusting temperature, time, and sometimes light therapy options. Because infrared saunas operate at lower temperatures (typically between 110°F to 140°F or 43°C to 60°C), they tend to be more tolerable for longer sessions, offering a gentler experience than traditional saunas. These pods are increasingly popular for personal wellness, spa treatments, and recovery purposes.

The global Infrared Sauna Pod market size was estimated at USD 126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.20% during the forecast period.
