## Abstracts

An infrared search and track (IRST) system (sometimes known as infrared sighting and tracking) is a method for detecting and tracking objects which give off infrared radiation (see Infrared signature) such as jet aircraft and helicopters. The biggest advantage of the IRST system is that they don't give off any infrared radiation of themselves which makes them difficult to detect unlike in RADAR which gives off an infrared signature of itself.

The global Infrared Search Track Irst Systems market size was estimated at USD 5552.78 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
