Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Infrared Single-Photon Counter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An infrared single-photon counter is a highly sensitive photodetection device capable of detecting and counting individual photons in the infrared (IR) spectral range, typically from 900 nm to 1700 nm or beyond. These devices operate based on various detection principles, such as avalanche photodiodes (APDs), superconducting nanowire single-photon detectors (SNSPDs), or photomultiplier-based systems, and are essential in applications requiring extremely low-light-level sensitivity. Infrared single-photon counters are designed to operate with high quantum efficiency, low dark count rate, and high timing resolution, enabling precise measurements of photon arrival times at the nanosecond or even picosecond level. They are critical components in cutting-edge technologies such as quantum key distribution (QKD), LIDAR, optical time-domain reflectometry, biomedical imaging, and astronomical observations. In particular, SNSPDs offer the best performance in terms of speed, sensitivity, and noise suppression, though they require cryogenic cooling. By converting discrete infrared photon events into measurable electrical pulses, these detectors enable researchers and engineers to measure, analyze, and utilize single-photon-level signals that would otherwise be undetectable with conventional sensors. As quantum optics, secure communication, and ultra-sensitive imaging systems continue to advance, infrared single-photon counters play an increasingly vital role in expanding the limits of optical detection.

The global Infrared Single-Photon Counter market size was estimated at USD 264.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

8.20% during the forecast period.
