Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on InGaAs Biased Detector competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The global market size of InGaAs bias detectors in 2024 is expected to be USD 403 million, with a market price range of USD 300-1500 per piece, and a global market output of approximately 300,000-500,000 pieces. InGaAs bias detector is a photodetector based on indium gallium arsenide (InGaAs) semiconductor material, which improves its response performance by applying bias. The detector can efficiently detect optical signals in the near-infrared band (about 900-1700nm) and has high sensitivity and low noise characteristics. InGaAs bias detectors are widely used in optical communications, laser radar, spectral analysis and other fields. As a key device for near-infrared and short-wave infrared detection, InGaAs biased detectors occupy an important position in optical communications, lidar, infrared imaging and other fields with their high sensitivity and fast response characteristics. The current technological development shows a trend of high performance and integration. APD and single-photon detectors continue to break through the sensitivity limit, and chip-level packaging and silicon photonic integration technologies promote the miniaturization of devices. In terms of the market, the demand for optical communications and autonomous driving continues to grow, driving the steady expansion of the global market scale, and the regional pattern shows the characteristics of Asia-Pacific production and North American innovation. At the policy level, countries have included optoelectronic devices in strategic industries and supported technology research and development through funds and policies. In the future, with the development of 6G communications, quantum technology and intelligent sensing, InGaAs detectors will continue to make breakthroughs in wider wavelength ranges, higher integration and lower costs, becoming an important growth point in the

optoelectronic field.

The global InGaAs Biased Detector market size was estimated at USD 403.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
