Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on InGaAs PIN Photodiode competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A p-i-n photodiode, also called PIN photodiode, is a photodiode with an intrinsic (i) region in between the n- and p-doped regions. Most of the photons are absorbed in the intrinsic region, and carriers generated therein can efficiently contribute to the photocurrent. Main players in the global InGaAs PIN photodiode industry are Hamamatsu, OSI Optoelectronics and GCS. These 3 companies accounts for over a third of global market share in total. Geographically speaking, Asia-Pacific is the largest market, accounting for over 40% of total market share, followed by North America with over 25% market share. In terms of active area diameter, below 1mm segment and 1 mm segment accounts for over half of total market share. In terms of application, analytical instruments is the largest end user and covers over 35% of total market share.

The global InGaAs PIN Photodiode market size was estimated at USD 135.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
