Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Inhalable Biologics competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Inhalable biologics refer to a class of therapeutic biological products?such as monoclonal antibodies, proteins, peptides, or nucleic acids?that are delivered directly into the lungs via inhalation. This drug delivery approach utilizes dry powder inhalers (DPI), metered dose inhalers (MDI), or nebulizers to target the respiratory system or achieve systemic circulation through the pulmonary route. Inhalable biologics offer advantages such as rapid onset, non-invasive administration, reduced systemic side effects, and localized treatment for conditions like asthma, COPD, cystic fibrosis, pulmonary infections, and even systemic diseases including diabetes or cancer.

The global Inhalable Biologics market size was estimated at USD 4625.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
