Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Inhalation Solutions for Nebulisation competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Inhalation solutions for nebulisation are liquid formulations designed to deliver medication directly to the respiratory tract and lungs in the form of fine droplets, providing rapid local therapeutic effects while minimizing systemic side effects. They are primarily used for the treatment of asthma, chronic obstructive pulmonary disease (COPD), bronchiectasis, cystic fibrosis, and respiratory infections, particularly suitable for pediatric, elderly, and acute patients. Key upstream raw materials include active pharmaceutical ingredients (APIs) such as budesonide, beclometasone dipropionate, ipratropium bromide, acetylcysteine, and salbutamol sulfate, along with excipients like sterile water for injection, buffering salts, surfactants, and stabilizers. Major API suppliers are concentrated in Europe, India, and China, while high-purity excipients and injection-grade solvents are provided by internationally recognized excipient manufacturers to ensure inhalation-grade standards.On the downstream side, primary customers for nebulisation solutions include hospital respiratory departments, specialized asthma and COPD clinics, long-term care and rehabilitation centers, retail pharmacies, homecare patients using nebulization therapy, and public healthcare procurement organizations. With the increasing prevalence of respiratory diseases and an aging population, market demand continues to grow. Nebulized inhalation also offers advantages in pediatric and critical care populations due to ease of use and high patient compliance, making it a key option in clinical prescriptions. Both global pharmaceutical leaders and regional generic manufacturers are actively investing in this sector to meet the expanding market needs.The majority of global capacity is concentrated among major multinational pharmaceutical companies in Europe and the U.S. (e.g.,

AstraZeneca, Boehringer Ingelheim), as well as generic manufacturers in India and China. Individual companies typically operate with annual capacities ranging from tens of millions to over 100 million units. Overall, the estimated global production capacity stands at 5–6 billion units per year, though actual utilization may fluctuate with seasonal respiratory disease prevalence and regional public procurement policies.

The global Inhalation Solutions for Nebulisation market size was estimated at USD 10768.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
