Abstracts

Injectable sumatriptan is a prescription medication belonging to the class of drugs known as triptans, specifically developed for the acute treatment of migraine and cluster headache attacks by selectively constricting cranial blood vessels and inhibiting the release of inflammatory neuropeptides associated with pain pathways. Marketed under various brand and generic names, this formulation is administered subcutaneously for rapid onset of action, making it particularly suited for patients requiring immediate relief or those experiencing nausea or vomiting that may impair oral medication absorption. Its mechanism targets serotonin (5-HT_{1B/1D}) receptors to abort migraine symptoms, positioning it as a first-line therapeutic option in many clinical guidelines for moderate to severe migraine episodes.

The global Injectable Sumatriptan market size was estimated at USD 497.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
