Abstracts

Injected plastic-bonded magnet assemblies are high-precision magnetic components manufactured by combining magnetic materials (such as NdFeB or ferrite powder) with thermoplastic polymers through injection molding. This process allows for the production of complex geometries with excellent dimensional stability and mechanical strength. Compared to traditional sintered or bonded magnets, injected magnet assemblies offer greater design flexibility, enabling the integration of multiple functions, such as metal inserts, gears, or motor components, reducing assembly steps and improving production efficiency. Additionally, they exhibit good corrosion resistance and environmental durability, making them suitable for applications in the automotive, motor, consumer electronics, and medical industries.

The global Injected Plastic Bonded Magnet Assemblies market size was estimated at USD 566.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
