Report Overview

An injection pen, also known as an insulin pen or auto-injector pen, is a medical device used to deliver specific dosages of injectable drugs in a controlled, convenient, and often self-administered manner. These pens are primarily used by patients requiring regular subcutaneous or intramuscular injections, such as those with diabetes, autoimmune diseases, or hormone deficiencies. A standard injection pen typically comprises a cartridge (pre-filled or replaceable), a dose-setting mechanism, and a disposable needle. For example, insulin pens can deliver doses in 1-unit increments, with a total capacity ranging from 300 to 600 units per cartridge. Compared to traditional syringes, injection pens enhance ease of use, reduce dosing errors, and improve patient compliance.
