Abstracts

Injection plastic-bonded permanent magnets are composite magnets made by mixing magnetic powders (such as ferrite or rare-earth magnetic powders) with polymer materials (such as nylon or PPS) and then molding them through the injection process. These magnets combine the magnetic properties of traditional sintered magnets with the processability of plastics, offering advantages such as high precision, complex shape molding, high mechanical strength, and excellent corrosion resistance. They are widely used in the automotive industry (e.g., sensors, motors, fuel pumps), consumer electronics (e.g., speakers, hard disk drives), and medical devices. Compared to traditional sintered magnets, injection-molded magnets reduce post-processing costs, enhance production efficiency, and enable multi-pole magnetization, providing greater design flexibility for modern precision magnetic components.

The global Injection Plastic-bonded Permanent Magnets market size was estimated at USD 482.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
